****PROFESSIONAL SUMMARY****

Strategic and performance-driven Senior Backend Developer with 8+ years of experience in architecting, developing, and maintaining scalable distributed systems. Expert in **Java, Go, and Python**, with a proven track record of migrating monolithic architectures to **microservices** and optimizing database performance by up to 40%. Adept at leading cross-functional teams in agile environments to deliver high-quality, cloud-native solutions that support millions of concurrent users.

****TECHNICAL SKILLS****

- **Languages:** Java (Spring Boot), Go, Python (Django/FastAPI), Node.js, SQL.
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Cassandra.
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Terraform, CI/CD (Jenkins, GitLab CI).
- **Architecture:** Microservices, Event-Driven Architecture, RESTful APIs, gRPC, Message Queues (Kafka, RabbitMQ).
- **Tools & Testing:** Git, Jira, Postman, JUnit, PyTest, Datadog, Prometheus.

****PROFESSIONAL EXPERIENCE****

[Current Company Name] | [Location]

Senior Backend Developer | [Month, Year] ? Present

- **Architected and led the migration** of a legacy PHP monolith to a Java/Spring Boot microservices architecture, resulting in a 50% reduction in system downtime and a 60% faster deployment cycle.
- **Optimized complex SQL queries** and implemented a Redis caching layer, reducing average API response latency from 450ms to 110ms for a platform serving 2M+ active users.
- **Designed and implemented an event-driven data pipeline** using Apache Kafka, enabling real-time analytics processing for 10TB of data daily.
- **Spearheaded the integration** of third-party payment gateways (Stripe, PayPal), which expanded the company's market reach to 15 new countries and increased annual revenue by \$2M.
- **Mentored a team of 6 junior and mid-level developers**, conducting rigorous code reviews and implementing TDD (Test-Driven Development) practices that decreased production bugs by 30%.

[Previous Company Name] | [Location]

Backend Developer | [Month, Year] ? [Month, Year]

- **Developed and maintained 20+ RESTful APIs** using Go and Gin, supporting a high-traffic e-commerce mobile application.

- **Automated infrastructure provisioning** using Terraform and AWS CloudFormation, reducing manual environment setup time by 80%.
- **Refactored a bottlenecked search feature** using Elasticsearch, improving search accuracy and reducing query time by 70%.
- **Collaborated with Frontend and DevOps teams** to implement a robust CI/CD pipeline, increasing deployment frequency from once a week to multiple times per day.
- **Reduced cloud infrastructure costs by 25%** by identifying and decommissioning underutilized resources and implementing AWS Lambda for asynchronous tasks.

[Earlier Company Name] | [Location]

Software Engineer (Backend Focus) | [Month, Year] ? [Month, Year]

- **Built the backend logic** for a customer loyalty module using Python and Django, which increased user retention by 15% within the first six months.
- **Integrated OAuth2 and JWT-based authentication**, improving platform security and ensuring HIPAA compliance for sensitive user data.
- **Resolved over 150+ critical tickets** related to database deadlocks and memory leaks, significantly improving platform stability.

****EDUCATION****

Bachelor of Science in Computer Science

[University Name], [City, State]

****CERTIFICATIONS****

- **AWS Certified Solutions Architect ? Associate**
- **Google Professional Cloud Developer**
- **Oracle Certified Professional: Java SE Programmer**

****PROJECTS (Optional)****

- **Open Source Contributor (Kubernetes):** Contributed documentation and minor bug fixes to the Kubernetes core repository.
- **Distributed Task Scheduler:** Built a custom distributed task queue in Go using Redis and workers to handle background job processing for 100k+ tasks/hour.

****How to customize this for the ATS:****

1. **Keywords:** If the job description emphasizes a specific tool (e.g., "Azure" instead of "AWS" or "GraphQL" instead of "REST"), swap those keywords in the Skills and Experience sections.
2. **Quantify:** Recruiters love numbers. If you managed 10 servers, say "10+." If you improved speed, give a percentage.
3. **Format:** Keep it simple. Avoid tables, columns, or images, as they can confuse some older ATS scanners. Use standard fonts like Arial, Calibri, or Roboto.
