

[NAME]

[City, State, Zip] | [Phone Number]

[Email Address] | [LinkedIn Profile URL] | [GitHub/Portfolio URL]

PROFESSIONAL SUMMARY

Senior Backend Developer with over 8 years of experience in designing, developing, and scaling robust distributed systems and microservices. Proven expertise in optimizing high-traffic server-side applications, improving system latency by up to 40%, and managing large-scale cloud infrastructure. Adept at leading cross-functional teams through the full software development life cycle (SDLC) using Agile methodologies to deliver high-quality, secure, and maintainable code.

CORE COMPETENCIES

- **Languages:** Java, Go (Golang), Python, Node.js, SQL.
- **Frameworks & Libraries:** Spring Boot, Django, Express.js, gRPC, Hibernate.
- **Data Management:** PostgreSQL, MySQL, MongoDB, Redis, Cassandra, Elasticsearch.
- **Infrastructure & Cloud:** AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, Terraform.
- **Tools & Middleware:** Apache Kafka, RabbitMQ, CI/CD (Jenkins, GitLab CI), Git, Prometheus, Grafana.
- **Architecture:** Microservices, Event-Driven Architecture, RESTful APIs, System Design, Scalability.

PROFESSIONAL EXPERIENCE

Senior Backend Developer | [Current/Most Recent Company]

[City, State] | [Month, Year] ? Present

- Architected and implemented a high-concurrency microservices ecosystem using Go and Kubernetes, supporting over 1.5 million monthly active users and ensuring 99.99% uptime.
- Engineered an event-driven data processing pipeline utilizing Apache Kafka, reducing data synchronization latency across services from 15 minutes to under 10 seconds.
- Led a team of 5 developers to migrate a legacy monolithic application to a containerized microservices architecture, resulting in a 30% reduction in infrastructure costs.
- Optimized slow-running database queries and implemented a multi-level caching strategy with Redis, improving API response times by 45%.
- Mentored junior and mid-level engineers through code reviews and technical workshops, increasing team velocity by 20% over 12 months.

Backend Engineer | [Previous Company]

[City, State] | [Month, Year] ? [Month, Year]

- Developed and maintained core RESTful APIs using Java and Spring Boot for a fintech platform processing \$10M+ in daily transactions.
- Integrated third-party payment gateways (Stripe, Plaid) and implemented OAuth2/OpenID Connect for secure user authentication and authorization.
- Designed a scalable notification system that dispatched 500k+ push notifications and emails daily with a delivery success rate of 99.8%.

- Authored comprehensive automated test suites using JUnit and Mockito, increasing code coverage from 65% to 88% and reducing production bugs by 25%.
- Collaborated with DevOps to build CI/CD pipelines in GitLab, automating the testing and deployment process to AWS environments.

Software Engineer | [Earlier Company]

[City, State] | [Month, Year] ? [Month, Year]

- Built and deployed scalable web services using Python/Django and PostgreSQL for a high-growth e-commerce startup.
- Streamlined database performance by implementing indexing and partitioning strategies for a multi-terabyte dataset.
- Assisted in the transition from manual deployments to automated container orchestration using Docker, reducing environment drift issues by 60%.
- Refactored legacy codebases to follow SOLID principles and design patterns, significantly improving code maintainability.

EDUCATION

Bachelor of Science in Computer Science

[University Name], [City, State]

TECHNICAL PROJECTS

- **Distributed Task Scheduler:** Built a custom distributed job scheduling system in Go that manages concurrent task execution across multiple worker nodes with fault tolerance.
- **Real-time Analytics Dashboard:** Developed a backend for a real-time analytics engine using Node.js and WebSockets, processing 10k events per second.

CERTIFICATIONS

- AWS Certified Solutions Architect ? Associate
- Certified Kubernetes Application Developer (CKAD)
