PROFESSIONAL SUMMARY

Senior Backend Developer with over 8 years of experience in designing, developing, and scaling robust distributed systems. Expert in microservices architecture, cloud-native development, and database optimization. Proven track record of improving system performance by 40% and leading cross-functional teams to deliver high-availability applications. Proficient in Java, Go, and Python with a deep understanding of AWS ecosystems and CI/CD pipelines.

TECHNICAL SKILLS

- **Languages:** Java (Spring Boot), Go, Python (Django/FastAPI), Node.js, SQL.
- **Backend & Architecture:** Microservices, RESTful APIs, GraphQL, Event-Driven Architecture, Serverless (AWS Lambda).
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Cassandra, Elasticsearch.
- **Cloud & DevOps:** AWS (EC2, S3, RDS, EKS), Docker, Kubernetes, Terraform, Jenkins, GitLab CI/CD.
- **Tools & Messaging:** Kafka, RabbitMQ, gRPC, Git, Prometheus, Grafana, JUnit, PyTest.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer | [Current Company Name]

[Location] | [Month, Year] ? Present

- Architected and implemented a high-throughput microservices ecosystem using Go and Kubernetes, supporting a 150% increase in concurrent user traffic (50k+ CCU).
- Reduced API response latency by 45% by implementing a multi-layer caching strategy with Redis and optimizing complex PostgreSQL queries.
- Spearheaded the migration of a legacy monolithic application to a decoupled architecture, resulting in a 30% reduction in deployment time and improved fault tolerance.
- Led a team of 6 engineers in the development of a real-time data processing engine using Apache Kafka, handling over 10 million events daily.
- Mentored junior developers through code reviews and technical workshops, increasing team velocity by 20% over four quarters.

Backend Developer | [Previous Company Name]

[Location] | [Month, Year] ? [Month, Year]

- Developed and maintained core banking APIs using Java Spring Boot, ensuring 99.99% uptime for critical financial transactions.
- Integrated third-party payment gateways (Stripe, Plaid), facilitating over \$2M in monthly transaction volume.
- Designed and executed a database sharding strategy for a 2TB MongoDB cluster, improving write throughput by 60%.
- Automated infrastructure provisioning using Terraform and AWS CloudFormation, reducing environment setup time from days to minutes.
- Collaborated with frontend teams to define and implement GraphQL schemas, reducing data over-fetching by 35%.

Software Engineer | [Earlier Company Name]

[Location] | [Month, Year] ? [Month, Year]

- Engineered backend features for a high-traffic e-commerce platform using Python/Django and PostgreSQL.
- Optimized background task processing using Celery and RabbitMQ, reducing order processing time by 50%.
- Identified and resolved critical security vulnerabilities (SQL injection, XSS) following an internal audit, hardening the application stack.
- Wrote over 500+ unit and integration tests, increasing code coverage from 65% to 92%.

EDUCATION

Bachelor of Science in Computer Science

[University Name], [City, State]

PROJECTS

- **Open Source Contributor (Distributed Task Scheduler):** Developed a lightweight task scheduling library in Go; gained 500+ stars on GitHub.
- **Personal Finance Tracker:** Built a serverless personal finance API using AWS Lambda, DynamoDB, and Cognito, serving 1,000+ active monthly users.

CERTIFICATIONS

- AWS Certified Solutions Architect ? Professional
- Certified Kubernetes Application Developer (CKAD)
