PROFESSIONAL SUMMARY

Senior Backend Developer with 8+ years of experience designing, building, and scaling robust distributed systems and microservices architectures. Expert in Java, Go, and Python with a proven track record of optimizing high-traffic applications for performance and reliability. Spearheaded the migration of legacy monoliths to cloud-native infrastructures, resulting in a 40% reduction in operational overhead. Committed to engineering excellence, CI/CD automation, and mentoring cross-functional teams to deliver high-quality software solutions.

TECHNICAL SKILLS

- **Languages:** Java (Spring Boot), Go, Python (Django/FastAPI), Node.js, SQL, Bash.
- **Backend & Infrastructure:** Microservices Architecture, RESTful APIs, GraphQL, gRPC, Docker, Kubernetes, Terraform.
- **Data Management:** PostgreSQL, MongoDB, Redis, Elasticsearch, DynamoDB, Apache Kafka, RabbitMQ.
- **Cloud Services:** AWS (EC2, Lambda, S3, RDS, EKS), Google Cloud Platform (GCP).
- **Tools & Methodology:** Git, Jenkins, GitLab CI, Prometheus, Grafana, Agile/Scrum, TDD.

PROFESSIONAL EXPERIENCE

[Current Company Name] | [City, State]

Senior Backend Engineer | [Month, Year] ? Present

- Architected and implemented a high-concurrency event-driven microservices ecosystem using Go and Kafka, supporting 1.5M+ daily active users and reducing system latency by 35%.
- Lead the backend migration from an on-premise infrastructure to AWS, utilizing Terraform for Infrastructure as Code (IaC), which decreased deployment time from 4 hours to 15 minutes.
- Optimized PostgreSQL query performance and database schema design, resulting in a 50% improvement in read/write throughput for the core transaction engine.
- Designed a centralized authentication and authorization service using OAuth2 and OpenID Connect, securing 20+ internal and external APIs.
- Mentor a team of 6 junior and mid-level developers through code reviews, architectural workshops, and pair programming, increasing team velocity by 25% over 12 months.

[Previous Company Name] | [City, State]

Backend Developer | [Month, Year] ? [Month, Year]

- Developed and maintained scalable RESTful APIs using Java/Spring Boot for a fintech platform processing \$10M+ in monthly transactions.
- Integrated 3rd-party payment gateways (Stripe, Plaid) and optimized webhook processing to achieve 99.9% reliability in transaction logging.

- Reduced cloud infrastructure costs by \$120k annually by identifying underutilized resources and implementing automated scaling policies in AWS.
- Collaborated with frontend and product teams to define API specifications, utilizing Swagger/OpenAPI to streamline cross-team development.
- Implemented automated unit and integration testing suites with JUnit and Mockito, increasing code coverage from 60% to 92%.

[Earlier Company Name] | [City, State]

Software Engineer | [Month, Year] ? [Month, Year]

- Engineered backend features for a high-traffic e-commerce platform using Python and Django, improving page load speeds by 20% through Redis caching strategies.
- Automated CI/CD pipelines using Jenkins and Docker, reducing manual deployment errors by 80%.
- Participated in on-call rotations and resolved critical production issues, maintaining a 99.95% uptime for core services.

EDUCATION

[University Name] | [City, State]

Bachelor of Science in Computer Science

CERTIFICATIONS

- AWS Certified Solutions Architect ? Associate
- Certified Kubernetes Application Developer (CKAD)
- Oracle Certified Professional: Java SE Developer

TECHNICAL PROJECTS

- **Distributed Task Scheduler:** Built a custom distributed task queue in Go using Redis for persistence and concurrency control, handling up to 10k tasks per second.
- **Open Source Contributor:** Regular contributor to [Project Name], focusing on performance optimization and bug fixes in the core engine.
