

# ALEX R. DEVLIN

San Francisco, CA | 555-0123 | alex.devlin@email.com | linkedin.com/in/alexdevlin | github.com/adevlin-backend

## SUMMARY

---

Performance-driven Senior Backend Developer with over 8 years of experience in designing, developing, and maintaining complex distributed systems. Expert in microservices architecture, cloud-native development, and database optimization. Proven track record of improving system latency and scaling infrastructure to support millions of concurrent users while leading cross-functional engineering teams.

## SKILLS

---

- Languages: Java, Go, Python, SQL, Bash, C++
- Frameworks/Libraries: Spring Boot, Node.js, Gin, FastAPI, Hibernate
- Infrastructure: AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, Terraform, CloudFormation
- Databases/Caching: PostgreSQL, MongoDB, Redis, Cassandra, Elasticsearch
- Messaging/Tools: Kafka, RabbitMQ, Git, Jenkins, Prometheus, Grafana, Postman

## PROFESSIONAL EXPERIENCE

---

### Senior Backend Engineer | CloudScale Systems

San Francisco, CA | January 2020 - Present

- Architected and implemented a high-throughput microservices ecosystem using Go and Kubernetes, reducing system downtime by 40% and increasing scalability.
- Led the migration of a monolithic legacy application to a decoupled architecture, improving deployment frequency from bi-weekly to daily via automated CI/CD pipelines.
- Optimized PostgreSQL query performance and indexing strategies, resulting in a 50% reduction in average API response times for data-intensive endpoints.
- Mentored a team of 6 junior and mid-level developers through code reviews, design docs, and technical workshops on system design patterns.
- Designed and integrated a centralized logging and monitoring solution using ELK stack and Prometheus, reducing mean time to recovery (MTTR) by 35%.

### Backend Developer | Innovate Data Corp

Austin, TX | June 2016 - December 2019

- Developed and maintained RESTful APIs using Java and Spring Boot to support a mobile application with 500,000+ monthly active users.
- Integrated third-party payment gateways and secure authentication providers using OAuth2 and OpenID Connect protocols.
- Built a real-time data processing pipeline using Apache Kafka and Spring Cloud Stream to handle 10,000+ messages per second.
- Containerized existing services using Docker, facilitating consistent development environments and streamlining the transition to cloud hosting.

- Collaborated with frontend engineers and product managers to define API contracts and technical requirements for new feature rollouts.

## **Software Engineer | StartUp Solutions**

**Austin, TX | June 2014 - May 2016**

- Engineered backend logic for a customer relationship management (CRM) tool using Python and Django.
- Managed database migrations and schema design for a rapidly evolving product roadmap.
- Implemented unit and integration testing suites that increased code coverage from 40% to 85%, significantly reducing production bugs.

## **PROJECTS**

---

### **Lead Contributor | Distributed Task Scheduler**

**GitHub Open Source | 2022 - Present**

- Built a fault-tolerant distributed task scheduler in Go that utilizes Redis for job persistence and worker coordination.
- Implemented robust retry logic with exponential backoff and dead-letter queues to handle transient failures in distributed environments.

### **Architect | Scalable E-commerce Engine**

**Personal Project | 2021 - 2021**

- Designed a microservices-based e-commerce platform using Python and FastAPI, featuring a search engine powered by Elasticsearch.
- Deployed the entire infrastructure on AWS using Terraform for Infrastructure as Code (IaC) and configured auto-scaling groups for peak traffic handling.

## **EDUCATION**

---

**Bachelor of Science in Computer Science | University of Texas**

**Austin, TX | 2010 - 2014**

## **CERTIFICATIONS**

---

- AWS Certified Solutions Architect - Professional
- Certified Kubernetes Administrator (CKA)
- Oracle Certified Professional: Java SE 11 Developer
