SUMMARY

Senior Backend Developer with over 10 years of experience in architecting and implementing high-scale distributed systems. Expert in microservices architecture, cloud-native development, and database optimization for enterprise-level applications. Proven track record of leading engineering teams to deliver robust, secure, and scalable backend solutions that support millions of concurrent users.

SKILLS

Languages: Java, Python, Go, Node.js, SQL, C++, Bash

Frameworks: Spring Boot, Django, Flask, Express, gRPC, GraphQL

Infrastructure: AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, Terraform, Helm

Data Stores: PostgreSQL, MongoDB, Redis, Elasticsearch, Cassandra, DynamoDB

Tools: Apache Kafka, RabbitMQ, Jenkins, Prometheus, Grafana, Git, CI/CD

PROFESSIONAL EXPERIENCE

TECHFLOW SOLUTIONS | San Francisco, CA

Lead Backend Engineer | January 2020 - Present

- Spearheaded the migration from a monolithic architecture to a microservices-based ecosystem using Spring Boot and Kubernetes, resulting in a 40% reduction in deployment time and improved system fault tolerance.
- Designed and implemented a high-throughput event-driven messaging system using Apache Kafka to handle over 500,000 events per second across multiple data centers.
- Optimized database performance by refactoring complex PostgreSQL queries and implementing a multi-tier caching strategy with Redis, reducing average API latency by 65% for high-traffic endpoints.
- Managed a cross-functional team of 12 engineers, overseeing technical design reviews, mentorship programs, and the implementation of automated testing frameworks that increased code coverage to 92%.
- Architected a secure OAuth2 and JWT-based authentication service that centralized identity management for a suite of 15 enterprise applications, improving the security posture of the organization.
- Collaborated with product owners to define technical roadmaps and prioritize feature development, ensuring alignment between engineering goals and long-term business objectives.

DATASTREAM INC | Austin, TX

Senior Software Engineer | March 2016 - December 2019

- Developed and maintained core backend APIs for a real-time data analytics platform using Python and Flask, serving a global client base of Fortune 500 companies.
- Integrated third-party cloud services and legacy internal APIs to enhance platform functionality, focusing on robust data ingestion pipelines and automated reporting tools.
- Led the transition to a containerized development environment using Docker, which standardized workflows across the engineering department and eliminated inconsistencies between local and production environments.
- Implemented comprehensive monitoring and alerting systems using Prometheus and Grafana, reducing the Mean Time to Recovery (MTTR) by 50% during critical production outages.
- Conducted regular security audits and vulnerability assessments of backend services, ensuring compliance with SOC2 and GDPR standards for sensitive client data handling.
- Mentored junior and mid-level developers through structured pair programming sessions and detailed code reviews, fostering a culture of continuous learning and technical excellence within the team.

CLOUDSCALE SYSTEMS | Seattle, WA

Software Developer | June 2013 - February 2016

- Built and scaled RESTful web services using Node.js and Express to support high-traffic e-commerce applications during peak seasonal periods and promotional events.
- Managed and scaled AWS infrastructure components, including auto-scaling groups and Elastic Load Balancers, to maintain 99.99% uptime for mission-critical services.
- Designed relational database schemas and performed complex data migrations for large-scale legacy systems, ensuring zero data loss and minimal downtime during transitions.
- Developed automated CI/CD pipelines using Jenkins and Shell scripts, reducing the manual effort required for releases by over 20 hours per week for the development team.
- Contributed to the development of internal tools for log aggregation and analysis, improving the ability of the support team to troubleshoot production issues in real-time.
- Participated in an on-call rotation to provide 24/7 support for high-availability backend services, consistently meeting service level agreements for incident response.

PROJECTS

DISTRIBUTED TASK SCHEDULER

- Developed an open-source distributed task scheduling engine in Go that utilizes a custom consensus algorithm for high availability and fault tolerance across worker nodes.
- Implemented a persistent task queue using RabbitMQ and provided a clean CLI interface for managing long-running background jobs with detailed status reporting.
- Achieved over 1,000 stars on GitHub and successfully integrated contributions from a global community of over 50 developers to expand feature sets.

SCALABLE REAL-TIME CHAT ENGINE

- Architected a WebSocket-based chat application capable of supporting 50,000 concurrent connections using Node.js and Socket.io with a focus on low-latency delivery.
- Utilized Redis Pub/Sub for cross-server communication and MongoDB for message persistence, ensuring seamless horizontal scaling across multiple cloud instances.
- Integrated end-to-end encryption for private messaging channels, adhering to modern security protocols for peer-to-peer data transmission.

EDUCATION

UNIVERSITY OF WASHINGTON | Seattle, WA

Bachelor of Science in Computer Science

CERTIFICATIONS

- AWS Certified Solutions Architect - Professional
- Certified Kubernetes Administrator (CKA)
- Oracle Certified Professional: Java SE Programmer
