SENIOR BACKEND DEVELOPER

Expert backend engineer with over 8 years of experience designing and implementing high-scale distributed systems and microservices. Proven track record in optimizing system performance, reducing infrastructure costs, and leading cross-functional teams to deliver robust API solutions. Specialist in Java, Go, and cloud-native architecture.

TECHNICAL SKILLS

- **Languages:** Java (Spring Boot), Go, Python (Django/FastAPI), Node.js, SQL, Bash.
- **Cloud & DevOps:** AWS (EC2, Lambda, S3, RDS, EKS), Docker, Kubernetes, Terraform, Jenkins, GitLab CI/CD.
- **Databases:** PostgreSQL, MongoDB, Redis, Cassandra, Elasticsearch.
- **Architecture:** Microservices, RESTful APIs, gRPC, Event-Driven Design (Kafka, RabbitMQ), System Design.
- **Tools:** Git, Jira, Postman, Prometheus, Grafana, Datadog.

PROFESSIONAL EXPERIENCE

Senior Backend Developer | TechFlow Solutions | San Francisco, CA

January 2020 ? Present

- **Architected** a migration from a monolithic Ruby on Rails application to a Java-based microservices architecture, resulting in a 45% increase in system deployment frequency and 30% reduction in mean time to recovery (MTTR).
- **Engineered** a high-throughput data processing engine using Go and Apache Kafka that handles 500k+ events per second with sub-100ms latency.
- **Optimized** database performance by refactoring complex SQL queries and implementing a multi-layer caching strategy with Redis, reducing database CPU load by 60% during peak traffic.
- **Spearheaded** the transition to Infrastructure as Code (IaC) using Terraform, automating the provisioning of AWS environments and reducing manual configuration errors by 90%.
- **Mentored** a team of 6 junior and mid-level developers, conducting code reviews and technical workshops that improved team velocity by 20% within the first year.

Backend Developer | CloudScale Systems | Austin, TX

June 2016 ? December 2019

- **Developed** and maintained 15+ RESTful APIs using Python/Django to support a mobile application with 1.2M active monthly users.
- **Implemented** an automated CI/CD pipeline using Jenkins and Docker, reducing the production deployment cycle from 4 hours to 15 minutes.
- **Reduced** AWS infrastructure monthly costs by \$12k (25%) through rightsizing instances, implementing Lambda for serverless tasks, and utilizing Spot Instances for non-critical workloads.
- **Integrated** third-party payment gateways (Stripe, PayPal) and OAuth2 authentication, ensuring PCI-DSS compliance and high security for financial transactions.
- **Collaborated** with frontend engineers and product managers to define API contracts using

OpenAPI/Swagger, streamlining the development lifecycle.

Junior Software Engineer | DataStream Inc. | Austin, TX

July 2014 ? May 2016

- **Contributed** to the backend development of a real-time analytics dashboard using Node.js and PostgreSQL.
- **Resolved** over 150+ critical bugs and performance bottlenecks, improving overall application stability by 15%.
- **Automated** repetitive data migration tasks using Python scripts, saving the engineering team approximately 10 hours of manual work per week.

EDUCATION

Bachelor of Science in Computer Science

University of Texas at Austin

CERTIFICATIONS

- AWS Certified Solutions Architect ? Professional
- Certified Kubernetes Application Developer (CKAD)
- Oracle Certified Professional: Java SE 17 Developer

PROJECTS

- **Distributed Task Scheduler:** Built a distributed task scheduling system in Go that utilizes a custom consensus algorithm to ensure high availability and fault tolerance across nodes.
- **Open Source Contributor:** Frequent contributor to various open-source backend frameworks, focusing on security patches and performance optimizations.
